# MEDICATION ADMINISTRATION

Fairchild Medical Center Foundation is continually looking for ways to improve the delivery of medical services in our community. With the expansion of Fairchild Medical Plaza, space has been designated for a Medication Administration area. The Foundation has taken on the task of raising \$50,000 for this project. Medication Administration is a widely used service by many members of our community with over 1000 visits a year.

*Fairchild Medical Center Medication Administration area will provide pleasant, convenient outpatient care for patients with medication administration-related needs.*

Medication Administration involves the administration of medication through a needle or catheter. It is prescribed when a patient's condition is so severe that it cannot be treated effectively by oral medications. Typically, Medication Administration means that a drug is administered intravenously, but the term also may refer to situations where drugs are provided through other non-oral routes, such as intramuscular injections and epidural routes (into the membranes surrounding the spinal cord).

Diseases commonly requiring Medication Administration include infections that are unresponsive to oral antibiotics, dehydration, gastrointestinal diseases or disorders which prevent normal functioning of the gastrointestinal system, and more. Other conditions treated with Medication Administration therapies may include congestive heart failure, Crohn's Disease, hemophilia, immune deficiencies, multiple sclerosis, rheumatoid arthritis, and more.

Our physicians, nurses and pharmacists will work together and with out of area physicians, to address individual physical and emotional needs of each patient. Nurses will be able to answer questions about treatment and side effects, as well as schedule follow-up appointments and tests. Our pharmacists will be available to provide consultations and instructions about medications.

*The variety of specialized treatments and procedures we will offer are:*

- *PICC Line Care*
- *Blood Transfusions*
- *Injections*
- *Iron Therapy*
- *Hydration*
- *IV starts*
- *Phlebotomy*
- *Central line care and draws*
- *IV antibiotics*
- *IV immune globulin*
- *Remicade Infusions*
- *Reclast*
